“YOUR BUSINESS COMPUTER SPECIALISTS”

## Why We Like AVG Anti-Virus Software?

For years we have relied upon F-Prot anti-virus software because of its ability to detect viruses while operating efficiently in the background of your system and not causing a major interference with your everyday usage. However, recently the landscape of keeping our customers safe has changed significantly. We have found that the threat to your online safety has become much more complex and more of the problems we are facing originate from legitimate and commonly visited websites. In light of this, we are now recommending our customers purchase AVG Anti-Virus software.

AVG has recently released version 9.0 of their software and here is what the company has to say about the new release: “AVG 9.0 will provide users with a more powerful and more streamlined solution that adds protection without impacting user experience, taking us back to our core strength of low impact, high performance security”, says J.R. Smith, CEO, AVG Technologies. “We’ve always believed that everyone has the right to a safe online experience. With AVG 9.0, we are providing first-class assistance to our users in development of tools and measures for their safety from all of the threats posed by cybercriminals and identity thieves, whether they’re working, playing, banking or shopping on the web.”

### **AVG 9.0 has the following features:**

- Because AVG knows scanning time is critical to its customers, scan optimization is a top priority for AVG 9.0’s combined anti-virus/anti-spyware scanner, which employs new technology.
- New in AVG 9.0 is the integration between the Resident Shield, firewall, and identity theft protection modules. This enables the modules to share malware information with each other, increasing AVG’s ability to detect and remove most malicious types of malware, rootkits, and ID Theft threats, for which signatures have not yet been issued.

- AVG 9.0 delivers improved anti-phishing detection through enhancements to its LinkScanner offering, which can now more quickly and accurately determine whether or not a web page is hosting a phishing attack.
- Responding to customer feedback, the AVG installation process has been shortened by 50 percent and the user protection process is simplified. Finally, it is also easier for users to detect and remove any third-party security product that could cause conflicts with AVG 9.0 and interfere with the user's level of protection.

With AVG Anti-Virus software installed on your computers and your server, you can more securely complete a host of functions such as:

- Exchange photos and other files.
- Safely shop online and carry on with your banking transactions without the fear of identity theft.
- Surf the Internet without the hassle of being attacked by viruses and malware.
- Protect your email Inbox from getting clogged by scammers, phishers, and spammers.

While receiving outstanding ratings for its highly efficient virus and spyware scanner, AVG Anti-Virus software manages its use of your computer's resources so as to not slow down your computer. In other words, when you buy AVG Anti-Virus software, you get what we believe to be the best anti-virus software on the market today. This means that AVG enables you to easily meet both your business demands and personal security objectives without compromising on security and compliance issues.
